

ADVANCED CLEAN TRANSPORTATION SOLUTIONS

for Parcel Delivery

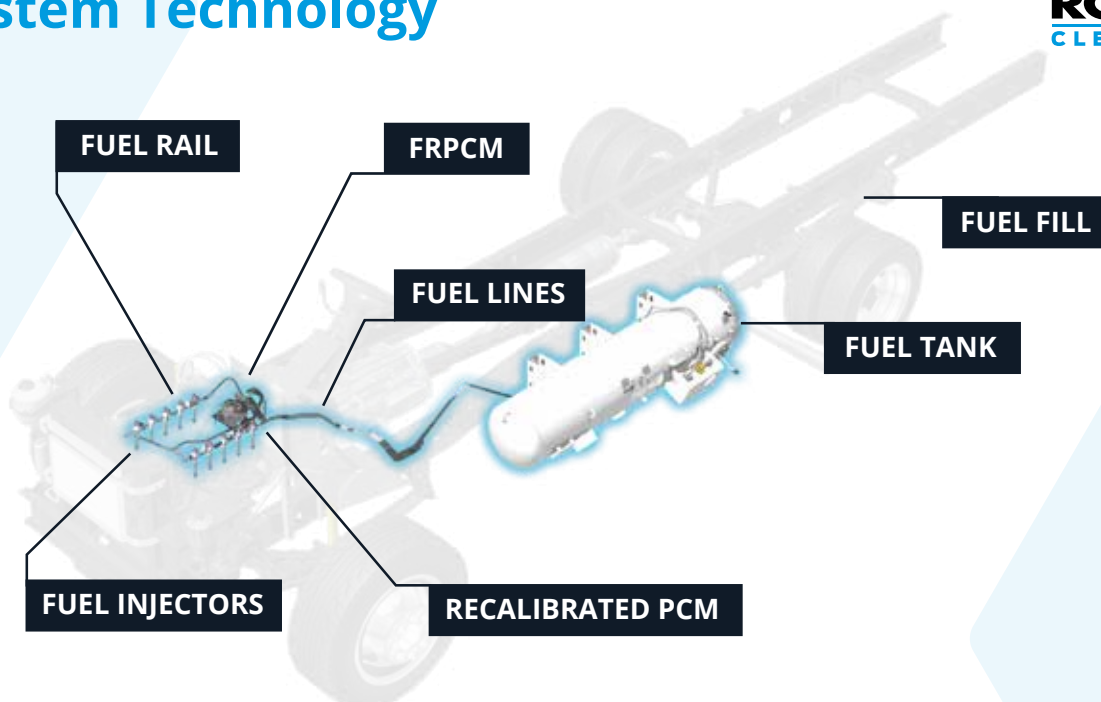

PROPANE AUTOGAS REDUCES:

✓ FUEL COSTS

✓ EMISSIONS

✓ MAINTENANCE COSTS

✓ TOTAL OPERATING COSTS

WHAT IS RENEWABLE PROPANE?

Renewable propane (also known as biopropane) is a non-fossil fuel that is produced from **100% renewable raw materials**. It's commonly produced from inexpensive and abundant feedstock like animal fat, algae and cooking oil. Renewable propane has the same chemical

structure and physical properties as conventional propane. Because it's produced from renewable raw materials, it has an even lower carbon intensity than conventional propane and is far cleaner than other energy sources.

The Advantages of Propane

- ✓ Domestically produced
- ✓ Abundant
- ✓ Safe
- ✓ Meets .02 NOx emissions
- ✓ Inexpensive compared to other alt fuels
- ✓ Easy to set up fueling infrastructure
- ✓ Proven track record
- ✓ No complex aftertreatment

"We're saving 70% on operating costs (maintenance and fuel) with our propane trucks compared to our diesel vehicles."

— Lisa McAbee, Owner of McAbee Trucking, Blacksburg, South Carolina and 18 Ford F-750 propane vehicles
